8-Port 10/100  
Fast Ethernet  
Switch

Desktop &  
Servers

Notebooks &  
Printers

Broadband  
Routers

Gaming &  
Media Centres

## Compact fast ethernet switching for home or office

Do you find it frustrating that you now have more networking products such as game consoles, laptops or media centres but don't have enough network ports on your Broadband router?

The new **SW80010-D** gives anyone instant network (LAN) expandability to their existing setup, allowing immediate connection of networking devices. Fully Plug n' Play, absolutely no messy configuration or software drivers to install, the **SW80010-D** is at home connecting Windows(tm), Mac(tm), Linux(tm), Raspberry PI(tm) or literally any device using IP.

And don't think all fast ethernet switches are the same. The newly re-engineered **SW80010-D** features an ASIC core and improved buffer handling to transmit your data faster, with reduced data 're-tries', so you can enjoy a more immersive visual and audio experience, reduced data buffering and of course faster return-to-application times for work or business users.

With silent operation and a small form-factor, the **SW80010-D** can be placed anywhere you decide with minimal effort.

## specifications:

8-Port 10/100Mbps auto-sensing ports

Superior performance compared to other vendor switches

Plug n' play for any network or operating system

Ideal for home networks, gaming and video streaming

Full/Half-duplex, 802.3x flow control with store & forward

Stack together for easily making bigger, instant networks

Silent and cool in operation - fits almost anywhere

External power supply

Retail packaging
