SWG80010-M

8-Port
Gigabit Desktop
Ethernet Switch

Add extra devices with gigabit speed performance

Broadband & workstations

IP-CCTV & video VoIP

NAS Storage

Multimedia & game consoles

Gigabit ethernet performance for your home or office network

Enjoy up to x10 the data speeds when compared with fast ethernet switches on your network.

The new Dynamode **SWG80010-M** is part of a new family of gigabit (1000BaseT) ethernet switches that allow blistering data performance on your existing cat5e or cat6 data cabling. Enjoy faster application load times, seamless work-flow on high usage applications such as photo and image applications and negate buffering when watching HD movies from your NAS (network attached storage) device.

Most new and relatively new computers, notebooks, NAS, game consoles and IP cameras for example already have a gigabit network adapter built-in, so its easy to simply through away your existing fast ethernet switch and upgrade to the Dynamode gigabit SWG80010-M.

Don't have gigabit at the moment or run a mixture of fast and gigabit? No problem. The Dynamode SWG80010-M auto-connects at 1000/100/10Mbps so you can run a mixture of devices on your network too.

Compact in size, silent operation with a robust aluminium finish together with status LEDs on all ports, allows the Dynamode SWG80010-M can be located quick and easily with minimal fuss.

Windows 8 Compatible

Mac

specifications:

- 8-port Gigabit (1000/100/10Mbps) ethernet switch
- Up to x10 data speed performance than fast ethernet*
- Ideal for home networks - NAS, IP camera, game consoles
- Negate annoying 'buffering' when watching HD movies
- Fully Plug 'n Play - works on all TCP operating systems
- Advanced ASIC processor for faster data transfers
- Mac size: 8K Packet Buffer: 128KB store & forward
- Compact and robust design with STP RJ45 ports
- Bundled with performance external Power Supply

CE FC RoHS COMPLIANT

*depending on applications and hardware specifications
